EDUCATION

Syracuse University

Bachelor of Science in Computer Science | 3.4 GPA

Jan 2021 - May 2024

SKILLS

Programming Languages: Python · JavaScript · TypeScript · SQL

Frontend: HTML · React · CSS

Backend: FastAPI · REST APIs

Cloud/Infra: AWS (EC2, Lambda, ASG, ALB, ElastiCache) · Docker · Redis/Valkey

Data/ML: pandas · PyTorch · scikit-learn · SHAP

Tools: Git · Supabase · Firebase · Vercel · Railway

EXPERIENCE

Software Engineer

[Stepscape](#)

Apr 2025 - Present

New York, NY

- Independently built and deployed a full-stack iOS and web application end-to-end, serving 70+ App Store users and 280+ users across 30 countries with zero paid acquisition
- Engineered a FastAPI backend with Redis/Valkey caching, reducing API calls by 90% and route generation time from 25–30s to 8s, optimizing performance and responsiveness for a growing user base
- Architected AWS infrastructure with Auto Scaling Groups and Application Load Balancer to handle variable traffic and ensure uptime for a production consumer-facing product
- Integrated OpenAI NLP and third-party APIs into a RESTful backend, building endpoints consumed by both web and mobile clients
- Implemented asynchronous processing pipeline to improve performance and ensure consistent request handling across varying user inputs

Software Engineering Resident

Headstarter

Apr 2025 - Aug 2025

New York, NY

- Built and deployed an AI voice customer service agent using Deepgram for real-time transcription, OpenAI for response generation, and Firebase for state management, shipped as a production-ready product
- Developed a property recommendation engine using XGBoost and SHAP explainability, surfacing model reasoning directly to end users through a clean Streamlit interface

Coding & Robotics Instructor

RoboFun

July 2025 - Present

New York, NY

- Teach coding and game design using Scratch and robotics using Lego SPIKE to K-12 students across both solo classes (8-10 students) and co-taught classes (25-30 students)
- Design and deliver hands-on lessons from scratch, adapting curriculum to different age groups and skill levels

PROJECTS

NFL Weather Bot | Independent Project - [Twitter Account](#)

Oct 2024 - Nov 2024

- Automated AWS Lambda + EventBridge pipeline containerized with Docker, integrating third-party weather and schedule APIs on a serverless architecture
- Published live to Twitter, growing to 471 organic followers and 10–20K impressions with zero paid promotion by delivering automated pre-game weather context each week throughout the NFL season

NFL ML Prediction Pipeline | Independent Project

Oct 2024 - Present

- Built an end-to-end ETL pipeline in Python processing NFL game data with automated validation, achieving 69% prediction accuracy using scikit-learn and pandas
- Integrated OpenWeather and The Odds API to enrich feature sets with real-time weather and betting market data, weighting input columns to improve model signal
- Selected for Sports Analytics Accelerator cohort to continue refining and productionizing the model alongside other engineers
